Don A. Crabbe, Research Specialist  
Dara L. Smith, Statistical Technician

Data used in preparation of this publication were compiled at the Criminal Justice Data Center and produced by the Research and Planning Bureau of the Montana Board of Crime Control.

## CRIME IN MONTANA - 1985

### FOREWARD

***Crime in Montana*** is an annual report of the Montana Board of Crime Control's Criminal Justice Data Center. It is a statistical representation of the criminal activity occurring in our state during the past year and includes a section on the Montana Youth Courts.

During the state's 1985 legislative session a new focus began to emerge for criminal justice; a concern for the impact crime has on its victims. Each one of the 57,645 serious crimes reported to our law enforcement agencies last year represents at least one more person to suffer from the trauma of being a crime victim.

This publication is only the first step in documenting the crime problem in our state and it would not be possible without the voluntary support of the law enforcement agencies who contribute the data.

Mike A. Lavin, Administrator  
Montana Board of Crime Control

# SECTION ONE

M. U. C. R.  
REPORTING  
PROGRAM.

## INTRODUCTION

This report presents the most complete and accurate information currently available about crime in the state of Montana. It contains an extensive collection of facts and detailed analyses of the prevalence of different types of crime, crime trends and offenses known and arrests made by law enforcement. It is a summary of the nature, extent and location of crime in the state.

The Montana Uniform Crime Reporting program addresses the informational needs of law enforcement administrators, planners, legislators, and local government officials. It also affords citizens an opportunity to assess the state's crime situation.

## HISTORY

The Board of Crime Control has been collecting data on criminal activity, arrests and offenses since early in the 1970's. Each year the data collection effort has improved to the point that accuracy of data is at the 95% level. The collection process started with a simple reporting system by individual police agencies in various parts of the state on a trial basis, which resulted in limited data giving only a vague picture of the nature of crime in Montana.

Working in conjunction with federal data collection agencies and other state agencies a *real* process started to emerge. The beginning saw a handful of police agencies involved, now there are over 100 reporting agencies.

The Montana Uniform Crime Reporting (MUCR) system evolved from and continues to comply with the Federal Bureau of Investigation's (FBI) national Uniform Crime Reporting (UCR) program. The national UCR program came into existence in 1930 as a result of the need for a nationwide and uniform compilation of law enforcement statistics. The Committee of Uniform Crime Records of the International Association of Chiefs of Police developed the UCR program, and Congress passed legislation on June 11, 1930 authorizing the FBI to act as the clearinghouse for crime information. In the late 1960's, with the availability of funds from the Law Enforcement Assistance Administration, individual states began assuming responsibility for direct collection of the UCR data. The number of law enforcement agencies participating in the UCR and related programs grew from 400 in 1930 to over 15,000 by 1981.

Montana became involved in the national UCR reporting program in September, 1978, when the FBI transferred data collection responsibility from its UCR reporting division to the Montana Board of Crime Control's Criminal Justice Data Center. This transfer has enhanced crime data collection by giving the state more control over crime reporting, closer contact with law enforcement agencies, and more detailed information about crime.

## TODAY'S PROCESS

### General Overview

The crime data contained in this report is initiated by the police departments, sheriff offices and other criminal justice agencies throughout the state. Criminal justice agencies that represent 94.9% of the state population are reporting criminal activity in their jurisdiction. This means 103 law enforcement agencies are diligently filling out reports and sending them to the central collection point, the Montana Board of Crime Control's Criminal Justice Data Center. The effort put forth by these agencies is most commendable.

## MUCR

The MUCR program is comprised of two distinct data base systems. The *Offense and Activity* system summarizes the types of crimes being committed, unfounded and actual offenses, property stolen and/or recovered by type and values, time and location of offenses, the status of each case, and the number of law enforcement officers killed or assaulted. The *Custody* system, now classified *Arrest/Custody*, records the types of arrests made, and the sex, race, and age of the person arrested. In 1986 the *Custody* system was expanded to collect information on people being held in jails throughout the state.

The transfer of responsibility for data collection from the FBI to the MUCR system has encouraged local law enforcement participation because the MUCR system provides contributors with both monthly and annual summaries of data for the *Offense and Activity* and *Arrest/Custody* information systems. Data is furnished voluntarily by county law enforcement agencies, local police departments, and other government agencies. Law enforcement agencies representing approximately 95 percent of the Montana population provided data in 1985.

In addition to the monthly reports to contributors, other reports and publications are compiled from MUCR data. These include the annual *Crime in Montana* publication and a variety of special reports requested by private and public groups. The MUCR system data is also sent to the FBI for inclusion in the annual FBI publication *Crime in the United States*.

## OBJECTIVES

The fundamental objectives of the Montana Uniform Crime Reporting program are:

- (1) To inform the Governor, Attorney General, Legislature, other governmental officials and the public as to the nature of the crime problem in Montana.
- (2) To provide law enforcement administrators with criminal statistics for administrative and operational use.
- (3) To determine who commits crimes by age, sex, and race in order to find the proper focus for crime prevention and enforcement.
- (4) To provide base data and statistics to help measure the workload of the criminal justice system.
- (5) To provide base data and statistics for research to improve the efficiency, effectiveness and performance of criminal justice agencies.

## DEFINITIONS

The following definitions are included to assist the reader in fully understanding the information provided in this publication:

**Offenses Reported or Known by Police** - Offenses or criminal acts that were reported, or became known, to law enforcement as having occurred during the reporting period.

**Unfounded or Baseless Offenses** - Offenses which are determined to be unfounded, false, or baseless as the result of subsequent information, action, or investigation.

**Actual Offenses** - The number of actual verified offenses which is the difference between the *Offenses Reported or Known* and the *Unfounded or Baseless Offenses*.

**Cleared by Arrest** - For MUCR purposes, an offense can be cleared by arrest or by exceptional means. An offense is cleared by arrest when an offender is identified, there is enough evidence to charge him, and he is actually taken into custody. The arrest of one person may clear several offenses and the arrest of several persons may clear one offense. When some element beyond law enforcement control precludes formal charges against the offender, such as the victim's refusal to prosecute or the death of the offender, an offense can be cleared by exceptional means. No distinction is made between cleared by arrest and cleared by exceptional means in this publication.

**Crime Index** - The crimes of willful homicide, rape, robbery, aggravated assault, burglary, larceny/theft, and motor vehicle theft were selected for use as an index on the basis of their serious nature, their frequency of occurrence and the reliability of reporting from citizens to law enforcement agencies. The crime index is the total number of these offenses that come to the attention of law enforcement agencies.

**Crime Rate** - The crime rate indicates the number of Index Crimes per unit of population, generally per 100,000 population. It should be noted that the rate only takes into consideration the numerical factor of population and does not incorporate any of the other elements which contribute to the amount of crime in a given community.

The crime rate is obtained by dividing the total number of Index Crimes by the population or estimated population and multiplying the answer by 100,000:

$$\frac{\text{Number of Index Crimes}}{\text{Population of Law Enforcement Jurisdiction}} \times 100,000 = \text{Crime Rate}$$

The population data used in this report are provided by the State Census and Economic Information Center and the FBI. The figures are based on the latest population projections available.

**Updated Data** - Any data published here concerning figures for prior years supersede those in previous reports.

**Percent Rounding** - Percentages shown in this publication may not add to 100 due to rounding.

## MUCR CRIME CLASSIFICATIONS

Reporting uniformity between law enforcement agencies depends upon the proper classification of offenses by the agencies. The MUCR system follows the basic guidelines for classifying offenses as formulated by the Uniform Crime Reporting Section of the FBI. It must be emphasized that the following classifications are not meant to be legal definitions of offenses. The classifications may differ considerably in some cases from the legal definitions as they are written in the Montana Code Annotated. The purpose of the FBI classifications is to establish a uniform statewide and national system for classifying similar offenses even though legal definitions may vary from state to state.

## THE SEVEN MAJOR OFFENSES

Seven crimes are recognized as being the most serious crimes in our society and the most likely to be reported to law enforcement. These are called the Seven Major Crimes, or the Part I Offenses. The MUCR system divides these crimes into "Crimes of Violence" and "Crimes Against Property":

### Part I Offenses - The Seven Major Crimes

#### Crimes of Violence.....

**Homicide** - The willful killing of one human being by another.

**Rape** - The carnal knowledge of a female forcibly and against her will and all attempts to commit forcible rape.

**Robbery** - The taking or attempting to take anything of value from the care, custody or control of a person by force or threat of force or violence and/or by putting the victim in fear.

**Aggravated Assault** - An unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault usually is accompanied by the use of a weapon or by means likely to produce death or great bodily harm.

#### Crimes Against Property.....

**Burglary** - The unlawful entry of a structure to commit a felony or theft.

**Larceny/Theft** - The unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another.

**Motor Vehicle Theft** - The theft or attempted theft of a motor vehicle.

Many Part II Offenses are reported in *Crime in Montana*. They encompass other crimes which, although serious, are not part of the Seven Major Crimes. These Part II Offenses are listed below:

#### Part II Offenses

Negligent Manslaughter  
Other Assaults  
Arson  
Forgery and Counterfeiting  
Fraud  
Embezzlement  
Stolen Property

Vandalism  
Weapons  
Prostitution  
Sex Offenses  
Narcotic Drug Laws  
Gambling  
Offenses Against the Family

#### CRIME FACTORS

The amount and type of crime reported in *Crime in Montana* is based upon the number of reported offenses and does not measure those offenses unknown to the law enforcement community. A considerable volume of crime is not reported to law enforcement agencies. Many crimes are unreported because victims are unaware they have been victimized or have themselves been participants in illegal activity. Unidentified crimes can include, but are not limited to, buying stolen property, fraud, embezzlement, and shoplifting. Illegal activity requiring victim participation can include prostitution and narcotics activity. Other reasons crimes are unreported are that victims believe there is very little that can be done to catch the perpetrator, they fear the publicity of a police investigation, or the crime was too personal or private to report.

The following factors can also influence the type and volume of criminal activity in the state:

Density and size of the community;  
Demographic characteristics of the population;  
Economic status of the population;  
Influence on population stability by seasonal workers, tourism, etc.;  
Educational, recreational, and religious characteristics of the population;  
Effective strength of local law enforcement agencies;  
Policies of prosecuting officials and the courts; and,  
Public attitudes toward laws and law enforcement.

## POPULATION

Population is estimated in most years based on FBI and state projections. The chart shows a steady growth over the ten (10) years shown, which is a 9.7 percent increase in population from 1976 to 1985. The population of 1976 was set at 753,000 and increased to 826,000 in 1985.

Population comparisons are used throughout the text to show crime rate, number of crimes per 100,000 population, and other analyses of crime in Montana.

## INDEX

Total crime illustrated includes only the seven (7) major crimes: 1) homicide; 2) rape; 3) robbery; 4) assault; 5) burglary; 6) larceny; and, 7) motor vehicle theft.

The seven (7) major crimes accounted for 34,948 offenses in 1985. Crimes of Violence numbered 1,722 at 4.9 percent of the total, while crimes against property were reported at 33,226 which is 95.1 percent of the total.

Crime rate is a standard of measurement used to provide a uniform process of statistical analysis of crime in any given area. The crime rate is useful when comparing jurisdictions with unequal populations.

The chart above indicates a trend declining over the past five (5) years. The base year of 1976 had a crime rate of 4,267.9 compared to the 4,231.0 rate in 1985. The low in 1978 actually measured 3,920 and in 1980 the high was 4,616. The calculated average would be in the 4,287 range.

## HOMICIDE

Homicide is defined as the willful (non-negligent) killing of one human being by another, except in those cases classified as justifiable homicides. Under the UCR definitions, justifiable homicides are specifically limited to the killing of an offender by a police officer in the line of duty or the killing of a felon by a private citizen. This definition does not take into consideration the findings of a coroner's jury or court. Suicides are not defined as homicides under UCR. Attempts to commit homicide are classified as aggravated assault.

## 1985 SUMMARY

A total of 28 homicides was reported in 1985. During this year, the number of homicides decreased 22.2 percent compared to those reported in 1984.

There were 23 homicides cleared by arrest or exceptionally cleared, for a clearance rate of 82.1 percent statewide.

Homicides accounted for 1.6 percent of all violent crimes and .08 percent of the total crime index. The homicide rate in Montana was .34 per 10,000 population.

## RAPE

Forcible Rape is defined as the carnal knowledge of a female through the use or threat of force. Assaults to rape or attempts to commit rape are included in this category. One offense is counted for each victim of rape. Statutory rapes and other types of sexual assaults are not counted as rapes under the UCR program.

## 1985 SUMMARY

A total of 148 rapes was reported in 1985. During this year, rapes decreased 5.1 percent compared to those reported in 1984.

There were 78 rapes cleared by arrest, or exceptionally cleared, amounting to a clearance rate of 52.7 percent statewide.

Rapes accounted for 8.6 percent of all violent crimes and .42 percent of the total crime index. The rape rate in Montana was 1.8 per 10,000 population.

## ROBBERY

Robbery is defined as the taking or attempting to take anything of value from the care, custody, or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear. Robbery is a violent crime in which the element of personal confrontation between the victim and offender is present. Attempts to rob are included in the robbery count. One robbery is counted for each distinct operation, regardless of the number of victims present at the time.

**1985 SUMMARY**

A total of 165 robberies was reported in 1985. During this year, robberies decreased 22.2 percent compared to those reported in 1984.

There were 54 robberies cleared by arrest or exceptionally cleared, amounting to a clearance rate of 32.7 percent.

Firearms were used in 31.5 percent of all robberies, cutting instruments in 18.8 percent, other weapons in 5.5 percent, and hands and feet in 44.2 percent.

Robberies accounted for 9.6 percent of all violent crimes and .47 percent of the total crime index. The robbery rate in Montana was 2 per 10,000 population.

## AGGRAVATED ASSAULT

Aggravated Assault is defined as an unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault usually is accompanied by the use of a weapon or by means likely to produce death or great bodily harm.

**1985 SUMMARY**

A total of 1,381 aggravated assaults was reported in 1985. During this year, aggravated assaults decreased .8 percent from the 1984 total.

There were 574 aggravated assaults cleared by arrest or exceptionally cleared for a clearance rate of 41.6 percent statewide.

Aggravated assault accounted for 80.2 percent of all violent crimes and 4 percent of the total crime index. The aggravated assault rate in Montana was 16.7 per 10,000 population.

## BURGLARY

Burglary is defined as the unlawful entry of a structure to commit a felony or theft.

## 1985 SUMMARY

A total of 6,484 burglaries was reported in 1985. During the reporting year burglaries decreased 1.8 percent from the 1984 total.

There were 814 burglaries cleared by arrest or exceptionally cleared for a clearance rate of 12.6 percent statewide. There were 22.5 percent of the clearances involving persons under 18 years of age.

Burglary accounted for 19.5 percent of all property crimes and 18.6 percent of the total crime index. The burglary rate in Montana was 78.5 per 10,000 population.

## LARCENY

Larceny/theft is defined as the unlawful taking, carrying, or riding away of property from the possession or constructive possession of another. It includes crimes such as shoplifting, pocket-picking, purse-snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, etc., in which no use of force, violence or fraud occurs.

## 1985 SUMMARY

The number of crimes classified as larceny reached 24,987 in 1985. This was a slight increase of 1.8 percent over the past year. There were 5,189 larcenies cleared by arrest or exception in 1985, which is a 20.8 percent clearance rate on a statewide basis. Persons under 18 years of age accounted for 24.8 percent of the clearances.

Larceny accounted for 75.2 percent of all property crimes and 71.5 percent of the total crime index. The larceny/theft rate in Montana was 302.5 per 10,000 population.

## MOTOR VEHICLE THEFT

Motor vehicle theft is defined as the theft or attempted theft of a motor vehicle.

**1985 SUMMARY**

A total of 1,755 motor vehicle thefts was reported in 1985. During the reporting year motor vehicle thefts decreased 13.7 percent from 1984.

There were 526 motor vehicle thefts cleared by arrest or exception with a 30 percent clearance rate statewide.

Motor vehicle thefts accounted for 5.3 percent of all property crimes, and 5 percent of the total crime index. The motor vehicle theft rate in Montana was 21.3 per 10,000 population.

# **SECTION THREE**

REPORTED  
OFFENSES

WOLFE  
Sawyer

**OFFENSES**

The 1985 state summary of offenses known to the police presents a breakdown of the numbers of offenses reported to law enforcement agencies, unfounded or baseless offenses reported, actual offenses, and offenses cleared by arrest. The column *Cleared by Arrest* is indicative of the total number of offenses, adult and juvenile, cleared by arrest. The *Cleared by Arrest Under 18* represents only juvenile arrests. The *Percent of Actual Offenses Cleared by Arrest* is the percent of total offenses, adult and juvenile, cleared by arrest.

1985  
STATE SUMMARY OF  
OFFENSES KNOWN TO THE POLICE

\*Indicates sub-categories of offense.

**CRIME IN MONTANA****From 1984 to 1985:**

- ^ There was a .4 percent decrease in the rate per 100,000 population of crime index offenses reported.
  - ^ There was a 4.4 percent decrease in the rate for violent crimes.
  - ^ There was a .1 percent decrease in the rate for property crimes.
- 

**Of the 1,722 violent crimes reported:**

- ^ Willful homicide accounted for 1.6 percent (28).
- ^ Forcible rape accounted for 8.6 percent (148).
- ^ Robbery accounted for 9.6 percent (165).
- ^ Aggravated assault accounted for 80.2 percent (1,381).

**Of the 33,226 property crimes reported:**

- ^ Burglary accounted for 19.5 percent (6,484).
- ^ Larceny/theft accounted for 75.2 percent (24,987).
- ^ Motor vehicle theft accounted for 5.3 percent (1,755).

### Crime Index Profile

The pie chart below shows the proportion of each index crime to the total of all 1985 index crimes.

The three property crimes, burglary, larceny/theft and motor vehicle theft, account for 95.1 percent of all index crimes. The violent crimes, homicide, rape, robbery, and aggravated assault, account for 4.9 percent of all index crimes.

1985  
CRIME INDEX PROFILE

	Number	% Of Total
Homicide.....	28	.08
Rape.....	148	.42
Robbery.....	165	.47
Assault.....	1,381	3.95
Burglary.....	6,484	18.55

**1985 - CRIME RATE  
SEVEN MAJOR INDEX CRIMES**

According to the U. S. Bureau of The Census, Montana's estimated population in 1985 was 826,000. This is the population figure used in calculating the crime rates in this publication.

**VIOLENT CRIMES**
**CRIMES AGAINST PROPERTY**

Index Offenses	Number of Actual Offenses	Rate per 100,000 Population	Index Offenses	Number of Actual Offenses	Rate Per 100,000 Population
Homicide	28	3.4	Burglary	6,484	785.0
Rape	148	17.9	Larceny /		
Robbery	165	20.0	Theft	24,987	3,025.1
Aggravated Assault	1,381	167.2	Motor Vehicle Theft	1,755	212.5
<b>Total</b>	<b>1,722</b>	<b>208.5</b>	<b>Total</b>	<b>33,226</b>	<b>4,022.5</b>
<b>GRAND TOTAL-----</b>				<b><u>34,948</u></b>	<b><u>4,231.0</u></b>

The 1985 Montana crime rate is 4,231.0. This means that 4,231 of every 100,000 Montana residents were victims of a major crime in 1985. In 1985 there were:

4,231 crimes per 100,000 persons  
423 crimes per 10,000 persons  
42 crimes per 1,000 persons  
4 crimes per 100 persons

The probability of being a crime victim in Montana for the year 1985 was 1 out of each 25 persons.

**Clearances**

An offense is considered cleared when a law enforcement agency has identified an offender, gathered sufficient evidence, and filed a charge, and he is actually taken into custody. The arrest of one person can clear several crimes or conversely, several persons may be arrested in the process of clearing one crime.

The following illustration shows the percentage of actual offenses cleared by arrest. Note that property crimes, burglary, larceny theft, and motor vehicle theft, have the lowest percentages of clearance, while violent crimes have the highest percentages of clearance.

**PERCENTAGE OF ACTUAL OFFENSES  
CLEARED BY ARREST -- 1985  
SEVEN INDEX CRIMES**

**Crime Incidence Comparison**

A comparison of the total number of crimes reported provides a measure of the fluctuation in criminal activity between 1984 and 1985.

The number of index crimes decreased by 40 between 1984 and 1985, a decrease of one-tenth of a percent. The overall incidence of crime increased 2.9 percent between 1984 and 1985.

**CRIME INCIDENCE COMPARISON  
1984 - 1985**

<b>Offense</b>	<b>1984</b>	<b>1985</b>	<b>Percent Change</b>

### Crime and Population Growth Trends

The crime rate and population growth trends for the past ten years are shown below. The crime index reflects the actual number of crimes reported to law enforcement.

In 1976, 32,137 index crimes were recorded for a crime rate of 4,267.9 per 100,000 population with a population of 753,000. By 1985, the number of index crimes had risen to 34,948, however, the crime rate has been reduced to 4,231.0 with an estimated population of 826,000. The 1985 figures represent a 8.75 percent increase in the number of index crimes, a .86 percent decrease in the crime rate, and a 9.7 percent increase in the population over the 1976 figures.

The crime index and crime rate figures have experienced a relatively smaller percentage of change than the population has over the ten year period. The crime index and crime rates have shown sharp, but sporadic increases over the period while the state population has shown a slight, but steady increase.

### CRIME INDEX, CRIME RATE, AND POPULATION (By Percent Change From 1976)

**AGENCY REPORTS**

This section contains a summary of offenses reported to each law enforcement agency. If the crime rates appear to be extreme for some jurisdictions, the cause could be a low population within that jurisdiction. In communities with low populations any fluctuation in the number of crimes has a major impact on the crime rate. Seasonal variations in population can have a marked influence on crime rates, when the permanent population is used as the base figure for computation.

### Summary

The 1985 crime rate for each reporting county in Montana is listed below. Eleven (11) counties had crime rates above the statewide total of **4,231.0** crimes per 100,000 population and accounted for 80.9 percent of the state's reported index crimes.

The eleven counties are not a contiguous geographical high crime area, nor do they all represent high population areas. Of the eleven, five are considered high population areas (having a population of 40,000 or more). The other six are moderate to low population areas. In areas of low population any fluctuation in the number of index crimes has a major impact on the crime rate.

## SECTION FOUR

JUVENILE  
PROBATION  
INFORMATION  
SYSTEM

## GENERAL ACTIVITY

The general activity of the Juvenile Probation offices (a part of the Youth Court), is measured in four component parts: number of cases, number of referrals, number of offenses, and number of detentions. **Cases** may be thought of as individual youth who become involved with the juvenile justice system for some reason. In 1985, 5,506 cases were reported on JPIS. The 5,506 cases were **referred** to the probation office 7,172 times throughout the year. In other words, some of the 5,506 youth were involved with the probation office more than once during the year (1.3 is average). The 5,506 cases incorporated 9,444 **offenses**, meaning multiple offenses tend to be involved in the referral (1.7 offenses per case is average). It is important to note, though, that the majority of cases are referred but once (81%) and commit but one offense. The average is skewed upward by a few cases referred multiple times for multiple offenses. It is the repetitive cases which tend to be defined as the more serious offenders. **Detentions**, the final measure, totalled 371 youth held in jail in 1985, which is about 5% of the referrals to Juvenile Probation. As the chart below indicates, the bulk of the general activity is with males on all measures.

5506 cases were referred 7172 times committing 9444 offenses resulting in 371 secure detentions

## REASON FOR REFERRAL

Four major categories or reasons describe the 7,172 referrals: 1) 44% are for property crimes such as theft, burglary, or larceny; 2) 30% of the referrals are for status offenses such as truancy, curfew, or runaway; 3) 21% of the referrals are for offenses against the public order such as disturbing the peace, or traffic violations; 4) 4% of the referrals are for crimes against persons such as robbery, assault, rape, or homicide. Crimes against persons command the most attention yet these are the fewest referrals. Many of the crimes against persons were for the offense of *simple assault*. In fact, 295 of the 340 referrals for crimes against persons were recorded as *simple assaults*.

### TOTAL REFERRALS BY OFFENSE

1985

## NUMBER OF YOUTH AT RISK

Consideration of the number of future referrals to juvenile probation should be in context of the total number of children in Montana who are "at risk", or how many children are in the state, who may potentially be referred for an offense of some type? During 1985 there were an estimated 111,100 children ages 9 through 17 at risk and most were 14 and 15 years old. There is, thus, a potential for increased rates of referral, offenses and detentions in 1986 for the 15 and 16 year old group based on the size of the 1985 *at risk* age group alone. Next year's report will tell us more.

NUMBER OF CHILDREN AGE 9 TO 17 IN 1985

source: John McQuiston, U of Mt. 1984

### RATE OF REFERRAL BY AGE

The number of youth at risk and JPIS information on the age at referral are used to calculate a rate of referral per 1,000 youth at risk for each age. This, as noted before, can help to pin point critical ages and potential changes in Youth Court activity. The rate of referral shown here reveals a straight line increasing from about age 12 through age 15, and then a slower increase at age 16 and 17. Thus, those youth coming age 15, 16 and 17 present the highest risk of referral. If the number of children in these ages increases, the activity of the Youth Courts may also increase. The peak rate of referral in 1985 was about 125 referrals for every 1000 youth age 17. On the other end, and equally important, is the rate of referral for the very young. For every 1000 children age 9 approximately 7 were referred to juvenile probation.

### RATE OF REFERRAL BY AGE AND SEX

The nearly straight line increases for the overall rate of referral shown in the prior chart has interesting inconsistencies when the sex of the youth is considered. This graph clearly shows differences in the rate of referral for boys versus girls when age 15 is reached. The rate of referral for boys continues to increase to age 17, whereas at age 14 girls show a rapid one year increase followed by noticeable declines. In addition, this chart shows the referrals to be predominately males in the 16 and 17 year old group. The peak referral rate for males is almost 180 per 1000 boys age 17 while female referrals peak at just over 90 per 1000 girls age 15.

### MOST FREQUENT REASON FOR REFERRAL

A previous chart, page 45, illustrated the four major reasons for referral to the Youth Court. Here we see the top eight specific reasons for the referral. As expected, a property offense, (larceny) reflects almost a quarter (23%) of the referrals. It is distantly followed by liquor law violations representing 14% of the referrals. The chart shows a mixture of criminal offenses with status offenses among the 8 major reasons. Curfew violations, runaways and some of the liquor law violations are all offenses only for minors and are of special concern to juvenile justice. The high number of larcenies is also of concern and requires more attention.

## COMPARISON OF REFERRALS

Referrals to juvenile probation are often broken into the criminal offense (delinquent) and the status offense (sometimes called YINS). This chart compares these referrals over a five year span. Remarkably, the percentage of status offenses has remained fairly consistent over the past years (about 30%). 1984 and 1985 saw general increases in total referrals after a low in 1983. The total number of referrals does change year to year, yet the magnitude of the change is not great. The average over the past five years is about 6,600 per year. The five year average for status offender referrals is 2,129 per year.

## WHO MAKES REFERRALS ?

It is clear that law enforcement agencies are the prime referral source. In 1985, the Police departments and Sheriff's offices accounted for 90% of all referrals. The remaining 10% is composed of a wide variety of referral sources including Fish, Wildlife and Parks, tribal courts, parents, or school officials. With 9 of 10 referrals involving law enforcement agencies, programs aimed at early intervention, diversion, and reduction of secure detentions should also address law enforcement needs and problems.

SOURCES OF REFERRALS  
1985

## PERCENT OF REFERRALS DETAINED

The percentage of all referrals resulting in secure detention (jail), affects planning for the removal of juveniles from adult jails. The reduction of the number of youth placed in adult jails, currently the only site available for secure detention, is a goal of the Youth Justice Council. Over the years a substantial reduction in the percentage of referrals detained has been evidenced. In the past, 25 to 27 percent of the referrals were detained. Over the most recent 5 year period reduction continued; in 1985 the percentage of referrals detained remained at 5%. It is expected that 5% represents a base percentage of referrals detained. In future years, neither continued drops nor great increases are anticipated. What is expected is the development of local or regional detention programs outside of adult jails for those few delinquents which require secure holding facilities. The enactment of specific detention criteria will help maintain a low level of detentions.

## THE NUMBER OF DETENTIONS

The chart below translates the percentage of referrals detained into the real number of secure detentions which occurred in 1985. The number of detentions of youth in adult jails in 1985 was 371, up slightly from the prior year. The chart shows detentions of both status offenders and delinquents. Importantly, the number of status offenders detained continued to drop in 1985 to a **new low** of 50; the percentage of detentions which are status offenders also continues to drop. An important goal is to reduce the detention of status offenders to zero. A crucial consideration behind the data presented here is the very small numbers of detainees. When status offenders are eliminated from consideration, the remaining number of secure detentions is so small that effective and cost efficient solutions are difficult to develop. It is also important to note that the status offenders detained were generally held less than 24 hours or were from other jurisdictions.

### TIME DETAINED BY SEX AND TYPE

JPIS data indicates great differences based on sex and category of offense. The average hours in detention, when broken down by sex and type of offense, continues to illustrate some of these differences. While male and female status offenders are nearly equal in the amount of time detained, there is a large difference from delinquent offenders. Boys charged with delinquent acts are held over twice as long as girls and, in addition, there are almost 4 times as many. The female delinquent, though, is not held much longer than status offenders, male or female.

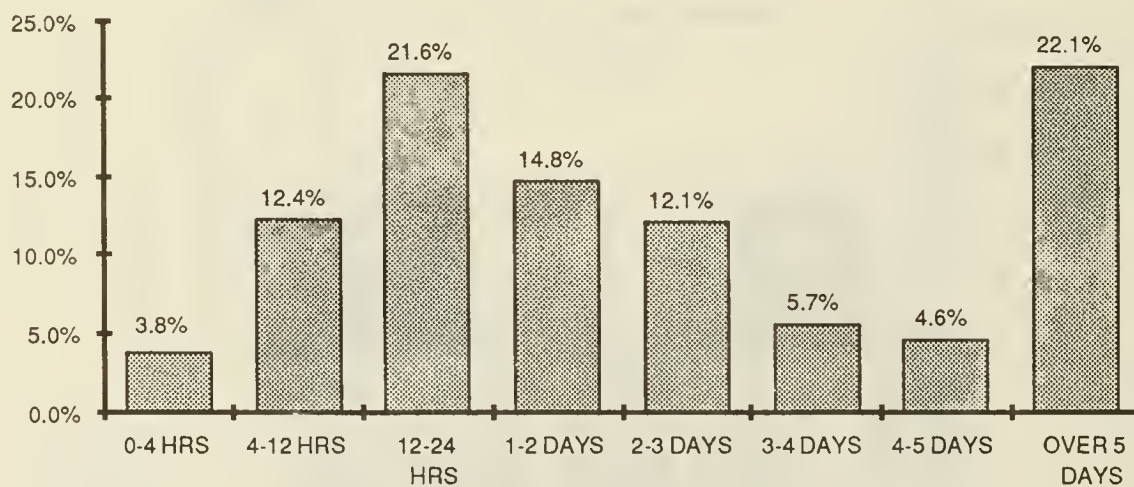

## DISTRIBUTION OF TIME DETAINED

The distribution of the amount of time detained is important since so few spend a lot of time in jail and so many spend so little time. This chart shows that over 50% of all the youth detained were held 2 days or less. On the other hand, note that only 22% of the youth detained spend **over 5 days** in detention. Stated another way, of the 371 youth detained, **82 of them spend more than 5 days jailed**. It is this distribution of detention time which has helped direct efforts to provide alternative means of detention and to examine ways to provide long term (5 or more days) detention services where needed. When only longer term secure detentions are considered on a statewide basis, the problem of effectively providing a detention program for an extremely small number of youth (82) is clear.

PERCENT OF  
YOUTH DETAINED  
BY TIME IN  
DETENTION- 1985

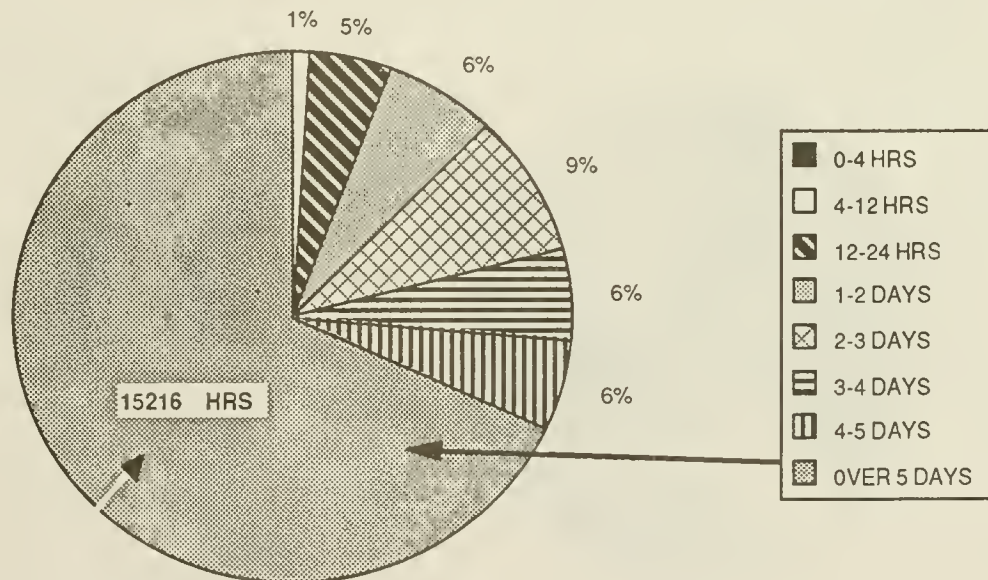

N = 371, 3% Unk.

## TOTAL HOURS DETAINED

The 371 youth detained in 1985 amassed 22,377 hours of time in detention across the state (which is 932 days or 2.6 years of accumulated time). The pie chart shows how the total hours accumulated were distributed by the length of time detained. The key point is, the youth who are detained long term, over 5 days, account for **over two-thirds** (68%) of all the time accumulated by all detainees. This means that the 82 long term detainees accumulated a total of 15,216 hours in jail (which equals 634 days or 1.7 years). On the average, then, these 82 youth were held 186 hours. By addressing the long term detainee issue, the major factor in the amount of time spent in adult jails will also be addressed. The average daily population of 'long term detainees' for 1985 would have been about 1.7 youth per day.

PERCENT OF TOTAL HOURS DETAINED

68% OF THE TOTAL 22,377 HOURS IN DETENTION

## REASON FOR LONG TERM DETENTION

The final graph related to detention is a pie chart depicting the specific offense listed for the long term detention of the 82 youth. The largest single specific offense is **burglary** which was the reason for 23% of the long term detentions. It is followed by *probation violation* at 13%. The *other* reasons cover a wide range from the violent offenses to resisting arrest. Note, however, that the property offenses of burglary, felony theft (over \$300), misdemeanor theft, and unauthorized use of a motor vehicle account for 48% of the long term detentions.

700 copies of this public document were published at an estimated cost of \$1.86 per copy, for a total cost of \$1,300.00, which includes \$1,300.00 for printing and \$.00 for distribution.
